

READY RANGE®

A Completely Modular Shooting Range & Live Fire Training System

Ready Range® is a turn-key solution for live-fire training requirements—commercial off-the-shelf, modular range systems engineered with 100% ballistic containment. Ready Range arrives complete with 1 lane or expandable with as many lanes as your organization requires to meet mission training requirements. Most organizations order 10 – 14 lanes. The Ready Range can be configured to a wide-open tactical training layout with custom lane widths per operator requirements. Either configuration comes complete with shooting stalls, target retrieval systems, bullet traps, programmable lighting, HVAC, and filtration systems.

MOBILE

Your mission will no longer be delayed by inconvenient training locations, restricted times of operation, or weather. Ready Range is the unlimited, anytime, live-fire training solution. Our modular ranges can be placed almost anywhere with little site preparation. You can train on your property, next to your business, or even inside your existing building. The Ready Range configuration can be disassembled, moved or relocated should the need ever arise. Regardless of your training challenges, Ready Range has you covered.

AFFORDABILITY

Our modular ranges eliminate the need for much of the pre-construction upfront costs. Engineering, architecture, extensive site planning, and construction management are a few areas you will save both time and money.

ECO-FRIENDLY

OSHA, NIOSH, and EPA regulations for air quality are met with every delivered modular range. The HVAC system maintains constant air flow and negative pressure to ensure that lead, smoke, and airborne particulate are moved away from the shooter.

EXPANDABILITY

The engineered design allows for expansion from 40 to 500 feet in length and one or more shooting lanes. Ranges can be customized and configured to expand with your budget and training needs.

SAFE

Ready Range incorporates specially selected ballistic and sound dampening materials tested by third-party to assure safety and function. Precise engineering, development, and material fitment work together to create a Zero Surface Danger Zone (SDZ) required for range safety certification.

HIGHEST QUALITY

All of our range components are fabricated in-house by our professional metal fabricators and engineered with specialty metals and techniques that allow us to maintain the highest level of quality for all of our products and components. All Ready Range materials are certified by an independent laboratory and designed to meet the toughest standards for value and long-term durability.

DON'T FALL FOR FAKES

We are the original innovators of true modular shooting range systems. Ready Range systems are designed to replace the brick and mortar or MILCON projects typically required when building a range. Ready Range uses minimal moving parts and individual bullet trap systems. Unlike competitors; In the event of a system failure, only one lane will need to shut down. All other lanes will remain operational. Your custom Ready Range can be delivered and operational in as little as 90 days.

FEATURES & BENEFITS

- Constructed for indoor live-fire shooting
- Prefabricated Ready Range delivered to any location
- Fabricated for maximum durability and safety
- Meets current environmental and safety regulations
- Optimal shooter training area and space
- Zero contamination to the outside environment
- Minimal maintenance and range downtime
- Minimal installation time
- Weekly, monthly and yearly rental programs available
- Ready Range typical lead times 15-180 days

2 Lane Modular Range
Expandable in 2 lane increment widths

7 Lane Wide Open Modular Range
