

# SIMCREATOR

## SIMCREATOR 4.0 WITH REALTIME SDK

Coming soon, our all-new SimCreator 4.0 features a powerful new software development kit that allows users to get under the hood of the popular SimCreator platform. This new SDK will give researchers access to robust tools and modules that will assist in building a variety of studies for research, ranging from the simple to very complex.

Realtime Technologies specializes in building world-class simulators for driving research. These bring together true high-fidelity multi-body vehicle dynamics and a real-time human-in-the-loop driving environment with precise vehicle and environment modeling. Our end-to-end customer-for-life approach encompasses custom simulation and engineering solutions, consulting services, and hardware/software development.

### FEATURES

- Ability for users to incorporate their own C++ modules
- Seamless integration for 3rd party libraries
  - Bypass conversion into the SimCreator component format
